

LEASED LINES

Entanet's leased line solutions enable businesses to meet their increasing demand for fast, continuous and secure connectivity to support essential communications.

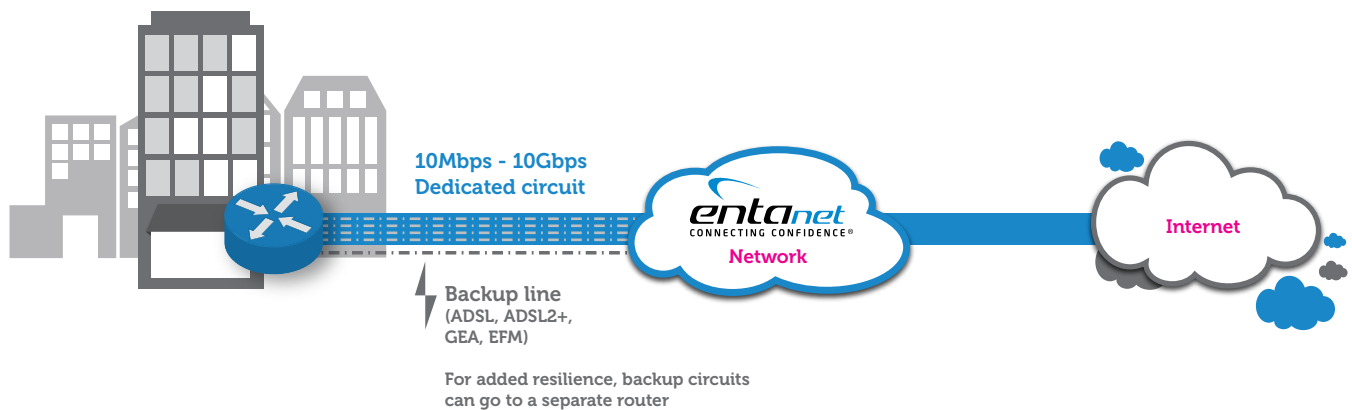

Available at speeds up to 10Gbps, our circuits are high-performance, permanently available, fixed cost connections designed to carry any combination of voice, data & Internet traffic. Coupled with our resilient national IP network, they're frequently used as the backbone of an organisation's full time communications infrastructure.

To ensure flexibility, bandwidth on our bearers can be quickly

increased from the initial setup as business demands dictate. Meanwhile, our provision of fully managed Cisco hardware as standard gives a confidence-inspiring level of assurance to complement the benefit of our UK-wide network footprint.

Customer confidence is also borne from the knowledge that the solution they purchase is fit for purpose, highly reliable and comprehensively supported. Each

Entanet solution carries a 100% Service Level Agreement where backup connectivity is provided, is continuously monitored and is supported 24/7 by our UK based technical engineers.

KEY FEATURES

- ✓ Dedicated, high performance connection
- ✓ 2Mbps - 10Gbps symmetric speeds
- ✓ Scalable solutions for future growth
- ✓ Comprehensive 100% SLA
- ✓ Backup options available
- ✓ Cisco hardware provided as standard
- ✓ 24/7 UK based tech support
- ✓ 24/7 NOC monitoring and maintenance

WHY LEASED LINES?

Businesses choose Entanet's leased line solutions for a variety of reasons. Some recognise that standard broadband connections without any kind of Service Level Agreement pose significant risk to the continuity of their business. Others see that sharing bandwidth with many other commercial and even residential users compromises reliability and can lead to performance fluctuation, whilst the consequence of losing connectivity altogether for any length of time is something they would rather not think about. Others simply recognise the need for a more substantial network infrastructure if they are to ensure continued quality of service within their business.

Leased line solutions are ideal for those whose business is heavily dependent on reliable connectivity, for example providing access to critical applications to employees and teams across multiple offices, adopting cloud hosted services, voice-over-IP and video conferencing to improve efficiency or simply because they require continuous and fast Internet access.
