

# Hosted Voice

THAT'S SIMPLE TO USE

# It just works...

Entanet's Hosted Voice service (still often referred to as hosted VoIP) allows you to use an Internet connection to make or receive telephone calls. Our service suits businesses that want to control their costs, easily manage their infrastructure and have the confidence in a system that just works.

Managed from an intuitive and incredibly easy to use web portal, you don't need to be technically minded to make our IP Voice services work for your business - nor do you need costly training. The portal is also mobile friendly to enable management of users or lines from any location and using any current device, leaving you free to spend time on the activities that make the greatest difference to your business.

We also understand that network performance is crucial to ensure call quality; and ours has a long pedigree. Our broadband network - over which voice traffic is always prioritised - is monitored and maintained 24/7 by our own Network Operations Centre to provide a reliable service that you can count on. Plus, as part of our commitment to affordability without surprises, we won't charge you any setup fees - you'll pay only for what you use. All of this makes our Hosted Voice the right choice for any business of any size.

## Looking for SIP?

Our Session Initiation Protocol (SIP) service is the perfect solution for those who just need call termination, and is equally easy to order.

# Reasons to choose ENTANET'S HOSTED VOICE

## For you as a channel partner...

**Easy to sell.** Hosted Voice is the ideal platform on which to build a profitable hosted voice business. From an affordable cost base, you can benefit from great margin opportunities that exist with a product that practically sells itself.

**Easy to set up, easy to use.** Users have complete control over their phone system through a mobile friendly web portal that's incredibly easy to use. Being web-based means any changes made take effect within seconds.

**Stand out from the crowd.** Our service has been handcrafted by our in-house software development team on open source code foundations from FreeSWITCH and OpenSIPS, providing crucial differentiation in a Broadsoft-dominated market.

**And there's more to come...** We'll also add new features on a continuous basis so you won't experience any delays caused by the carrier's roadmap.

## For your business customers...

**Ultimate flexibility.** We don't set limits on the number of seats per installation, meaning that the telephony estate can grow or shrink in line with business demands.

**Affordable call rates.** Calls over IP are cheaper than standard telephony, reducing their outlay from the outset.

**No hidden costs.** Your customers will pay only for the number of seats used and calls made ensuring real control over their monthly spend.

**Work from wherever you want.** Your customers can log in to IP Voice from any location, giving them the freedom to work from home, pop-up premises or even the beach if they prefer.

**Business continuity built in.** Being hosted in the cloud means if the business premises are affected by a disaster, the business can continue to function as normal from any other location of their choosing.

**No tie-ins.** We believe in being flexible so our Hosted Voice service is available with 30-day contracts. We have a handset recommendation for a "it just works" experience, but the choice is entirely your customers'.
