WHOLESALE BROADBAND

If you have a base of connections and want to offer your unique broadband products at competitive rates without having to undertake costly, large scale network development, our wholesale proposition is for you. Enjoy simple ordering via our portal or XML and freedom from the bureaucracy of dealing with carriers.

MORE RESILIENT

Unlike other carriers, Entanet offers you a wide choice of locations for your multiple resilient (if required) interconnects, and at a lower cost.

We built out our network to every one of the key 'Aggregation

Points' that form BT's 21st Century Network and have fully adopted both the Wholesale Broadband Connect (WBC) and IPStream Connect (IPSC) products. This gives you future-proof access to ADSL/ADSL2+ and FTTx broadband technologies via a single delivery platform for your ease of management.

MORE COST-EFFECTIVE

We offer fairer 95th percentile billing as standard, protecting you from demand peaks. To give you certainty in your bandwidth spend, we build in cost caps. To maximise your investment in bandwidth, we uniquely offer a choice of traffic-shaping policies:

OPTIMISED

Interactive traffic like VoIP is prioritised over our network; non-interactive bulk services like torrents are given lower priority than browsing. Your users get a good experience and you don't waste bandwidth.

PROTECTED

All your traffic is carried at the highest priority, except for days when huge updates are released. These are still delivered, but not at the expense of business critical traffic, giving your users a better experience.
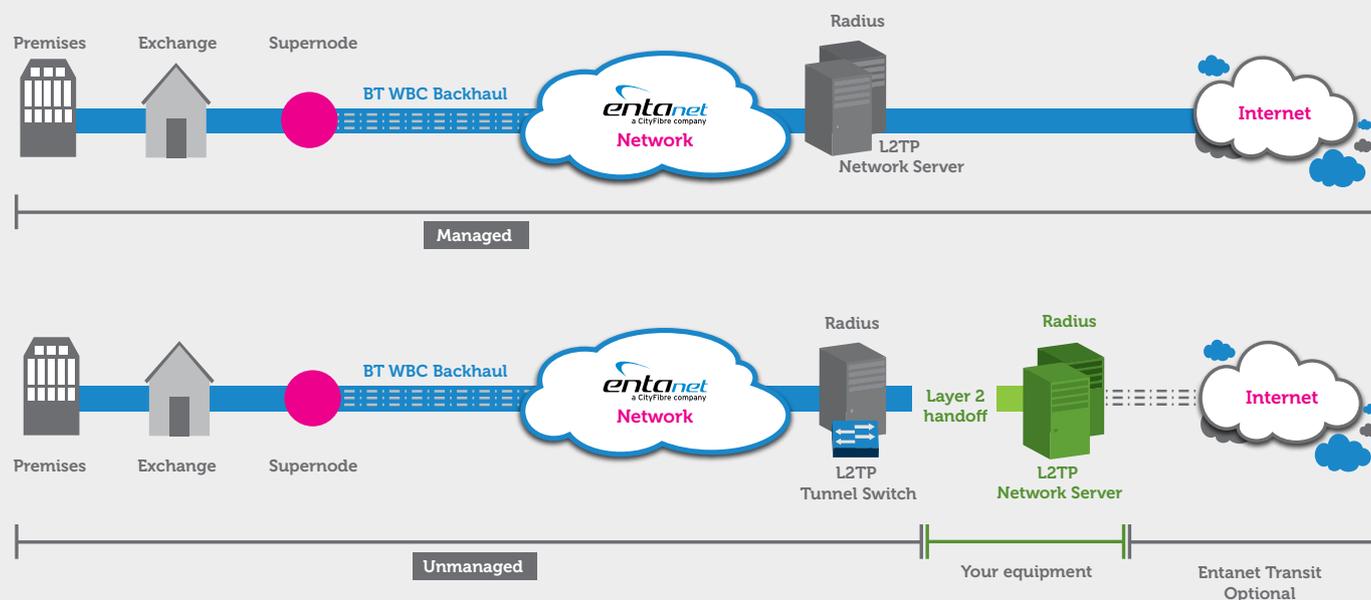

MAXIMISED

All your traffic is carried at the highest priority.

MORE FLEXIBLE

If you want to take the first steps into wholesale, take our managed option and we will look after the Layer 2 Network Switches (LNS) and Radius servers which authenticate your users for you. If you have your own network infrastructure, our unmanaged option is for you.

Managed diagram:
Premises — Exchange — Supernode — BT WBC Backhaul — entanet Network — Radius / L2TP Network Server — Internet
[Managed]

Unmanaged diagram:
Premises — Exchange — Supernode — BT WBC Backhaul — entanet Network — Radius / L2TP Tunnel Switch — Layer 2 handoff — Radius / L2TP Network Server — Internet
[Unmanaged] — Your equipment — Entanet Transit Optional

We offer choice on billing models too - a low price for tails and a price for bandwidth, where the higher commit the lower your per Mbps cost[1]. Or, a bandwidth-inclusive tail price for simplicity; the choice is yours.

Where your customer base is split between IPStream Connect (IPSC) and Wholesale Broadband Connect (WBC) users, you have the choice of resilient interconnect options, either using virtual routing and forwarding or dedicated links per traffic type ("split billing").

EASY TO ADOPT

Uniquely because of our network, we can migrate your 21CN users whilst keeping their realm, which means that there is no need for your customers to change usernames on their routers.

THE INTERNET AT ITS BEST

Our decades-long pedigree in the market means your users have access to our high-quality peering relationships with the likes of the BBC, Amazon, Google and Apple, minimising any delay in getting to

the information that matters to them.

HELP IS AT HAND

When you need assistance, it's good to know you can get through to someone quickly who will take ownership of your enquiry or problem and stick with it to the end. Continuous investment in our service team means we don't keep you hanging around, typically answering calls within thirty seconds. Our experienced non-scripted UK based technical support team is available 24/7/365.
